

Which Antivirus should be used?

We strongly recommend you to install only reputed Antivirus software in your computer. Few Antivirus programs which we have tested and recommend are listed herein below in the order of popularity.

- [Norton products](#)
- [Symantec Endpoint Protection](#)
- [Microsoft Security](#)
- [McAfee products](#)
- [Kaspersky products](#)
- [Trend Micro products](#)
- [Avast products](#)
- [Bitdefender](#)
- [ESET](#)
- [Malwarebytes](#)

Each one of the installation files of our software is digitally signed to protect it from viruses. Further, we scan the files in all major Antivirus programs before publishing. Therefore, we categorically assure that our applications are 100% safe to install.

In spite of the same, in some cases, some antivirus programs may give false warning or delete the application files. To overcome such problems, we are putting in our best efforts by interacting with major Antivirus software vendors wherever possible.
