

System requirements for Winman CA-ERP Desktop Edition

CA-ERP desktop edition software will be installed on every client computer (Licensed computer).

The software uses file system for data storage. All the data entered in the software will be saved in '.tax' files similar to MS Word & Excel. You can configure the software in all licensed computers to save the data in a common data path or separate data path.

Winman CA-ERP does not have any special system requirements. It works in all the PCs where MS excel and MS word works.

COMPONENT	REQUIREMENT
Processor	1GHz or above (32 or 64 bit)
RAM	1.0GB or above
Hard disk	1.5GB for installation and additional storage for data depending on number of files (Average size of a file will be around 1MB)
Display and graphics	With resolution 1024x768 or above
Operating system	Windows 7 or above; Windows Server 2008 or above
Browser	Internet Explorer 9 or above
Microsoft .Net Framework	4.0 or above
Network (LAN)	100 Mbps or above if accessed over LAN
Internet connectivity	For downloading updates and accessing online features such as PAN validation, e-filing, Query Manager etc.
Additional software	Certain functionalities require MS office (Excel and Word), Adobe reader 11 or above, Java 8 update 66.

Note: By default, Winman CA-ERP uses MS Access database (This database is used by software internally for reporting etc. Actual data will not be saved in this database). If more than 10 clients are using common data path, SQL server 2008 R2 SP2 (Any edition) or above will be required for better performance.
